

5 REASONS TO TRY

SELECT HV[®] ETCH with BAC

35% Phosphoric Acid Etchant with Benzalkonium Chloride

Rx Only

1 **High Viscosity**

Offers pin-point placement making it ideal for etching enamel margins, otherwise known as the selective or “hybrid” etch technique. However, it can be used for the total-etch technique as well.

2 **Unparalleled Bond**

Creates microretentive surfaces that are necessary for successful bonding. Published research proves that BISCO etchants produce higher bond strengths to (wet or dry) dentin¹ and enamel.

3 **Easy Wash Off**

Rinses away cleanly and quickly, leaving no residue to interfere with bonding.

4 **Contains BAC**

An antimicrobial agent. In-vitro research shows it is effective against both *Actinomyces viscosus* and *Streptococcus mutans*.^(2,3,4)

NOTE: Inclusion of BAC has not been shown to correlate with a reduction in secondary decay in patients. In-vivo clinical studies to evaluate the effects of BAC on oral bacteria or caries have not been performed.

5 **Easy Handling**

Designed to offer maximum handling and precise placement, while eliminating run-on onto the occlusal dentin surface.
